(2) continued work on the (131)
group of buildings numbered 800 and
900. 230

In 800 we have now cleared past
the test trench (X) put in to reveal
depth of debris (see p. 9. B. 106). We are
approaching the granite obelisk of
Attenean which protrudes from the
subak masonry, but is a little to the
side of 800. Obelisk.
