- ④ The clearing of the debris behind 200 and of the back wall continued. The debris filled trench left by those who stole the stones from the back wall is characteristic.

This shows that the stones of the wall removed after the formation of the "bank of debris."

- ⑤ At Bldg. 500 A, cleared away the layer of debris of decay just over the lowest floor and found that this contained two stone pavements.

These pavements represent an older building, - possibly Takaka.
