

(5) B 502 EX."S"

Jan. 20.

Continued excavation of rect. pit.  
I estimate cubic cont.[?] to be moved at  
150 cubic meters. A great nuisance, simply  
to get a dumping ground.

(6) B 200

Jan. 20.

Continued at B 1200. Now  
working at debris "E" and "W" of RW on  
"N" next to 1202. The floors of the  
upper rooms are all gone. None of  
the walls above Aspalta's show any  
doorways and are all clearly f. walls.

[Drawing]

Aspalta room  
has no doorway in  
"N", "S", or "E" wall.

This room appears  
to be the end room  
of a building whose  
axis runs "E"- "W".

The heavy wall III  
outside in 1201-5 appears to have  
belonged to the Aspalta complex.

[Drawing]

Here I cut away upper  
wall (II) exposing  
first wall (III) built  
against older small  
wall (date of 1203, 1204).

In "S" wall of 1202  
near "SW" corner, cut  
a hole near bottom  
of wall (II) and exposed wall II about  
80-90 cm in.

[Drawing]

Outside "SW" corner of 1202, cleared along  
wall V.

[Drawing]

Wall V is later  
than III and earlier  
than II. It is  
built against III  
and overbuilt by II
