

April 5
(63)

a late date (2000 A.D.) (Lambert 1444 agreed). ① But 200 sub and the ²⁴³ earliest remains in 500 A showed that ~~this~~ exact type of masonry (stones $\frac{1}{2} \times 1$ Egypt. ell, $26 \times 52 \frac{1}{2}$ cm) of grey or yellow sandstone, laid in cement) was earlier than Atlamsa at any rate. Wherever it occurred it was the earliest thing at the place. ② The evidences have firmly established the N.E. occupation and all the N.E. stones so far identified are of grey sandstone. ③ The ^{fine} wall at 509-511 is earlier than the massive red wall and founded on red gravel gravel.

In addition, a grey stone was found apparently from an inscribed wall

with a row of cartouches incised

alternating 3 of each and edge (m.r.) of a 4th

[the stone is 26×52]

This indicates that this part of the temple 500 is at least as early as Ramses II.

These three facts establish beyond doubt that the fine masonry belongs to the
