

(Feb. 26)

(30)

which the sebbahin have cleared to gebel (alluvial mud). I propose to clear a broad  
 —→ trench NNE towards Blg 700 by dumping on this cleared space. Small frags.  
 of granite and inscribed sandstone occur in the rubbish from the sebah sieves. Also  
 potsherds (Meroitic or earlier).

(6)

Large gang now on Trench D, Blg 500.

[DRAWING]

[DRAWING]

The proximity of the rock shows that we may —→ dump NE without fear of  
 covering anything. The mass of potsherds noted by Cailliaud and Lepsius is refuse from  
sebah sieves, and marks the site of the temple dump.
