

(Feb 8th) (6).

1916

Continued work ~~on~~ approach to $\frac{98.4}{97}$

XIX. A roughly made stair at S. end goes down ca $1\frac{1}{2}$ m, then a nearly level rock floor extends to N end, the door (filled with laminated drift) being ca 75 cm. high. In front of door in W corner a roughly circular hole descending vertically into the rock, cleared to a depth of ca $3\frac{1}{2}$ m (continuing).

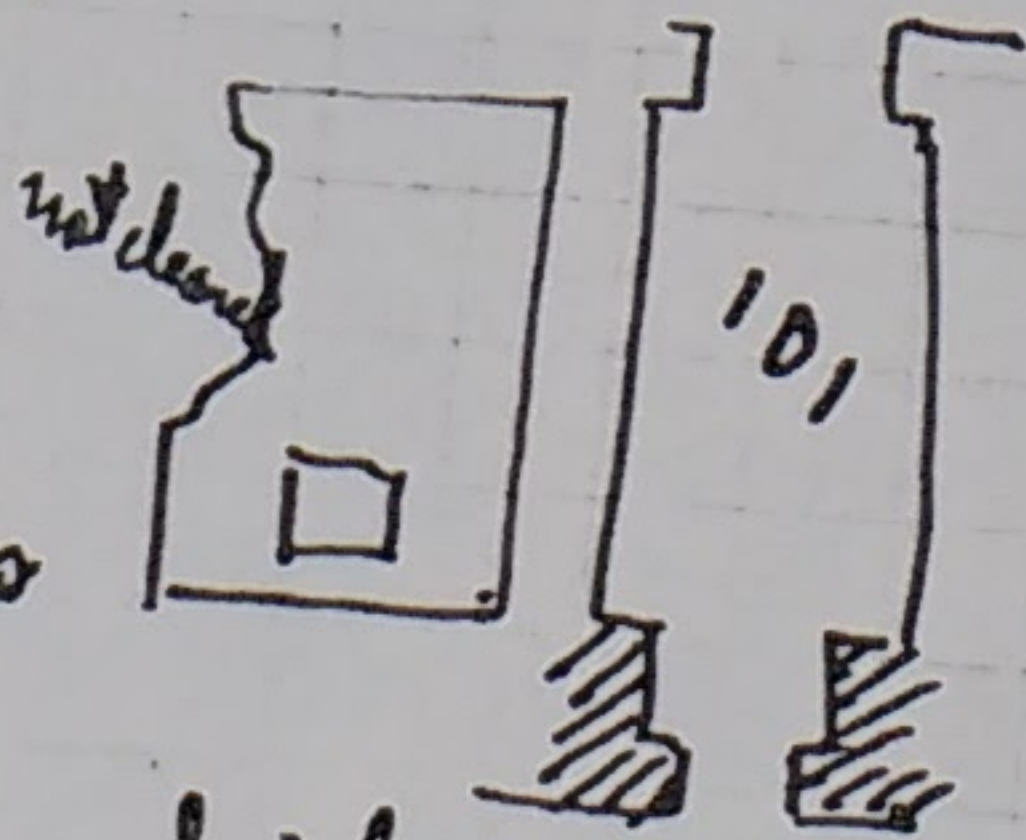

Filling of hole is sandstone debris.

(7).

Continued clearing building 100, to West of 101-102. Immediately west of 101 an apparently blind room with rectangular mud brick pillar (foundation only), similar to those in 111.

Work also on Rooms

121, 122, the plan of which is now clear.
