Barkal VIII

(B 502
Jan. 26.)

[Crossed-out Drawing]

[Drawing]

At x, cut through a hole in later pavement to foot of foundation of "N" wall. It is founded in alluvial mud. The space between the older foundation piers have been packed with mud (not crude bricks). They also are founded in mud stratum.

[Drawing]

I believe the well 503 EX "N" was dug from this construction and that the mud in it came from the excavation of the foundation of B 502.
