which the settlers have cleared to
get (alluvial mud). I propose to clear
a broad tunnel $\rightarrow$ NNE towards Bly 200
by dumping in this cleared space. Small
frag. of granite and inscribed sandstone occur
in this rubbish from the settlers sieves. Also
potsherds (granitic or earlier).

⑥ Large gang now on Trench D, Bly. 500.

The proximity of the work shows that we
may dump $\rightarrow$ NE without fear of
covering anything. The mass of potsherds
noted by Gailliard and Lapsius is
refuse from settlers sieves, and marks
the site of the temple dump.
