

(Pt. 13)

preserved, - brick on edge, sketches alternating.

110
72

- ⑥ Building 100 was finished to the floor about 3:30. It is quite clear that we have in the plan the subsidiary (ground) floor of which only rooms 101 to 108, 121, 122, 124 were accessible (cellar rooms). The main floor was undoubtedly above. The plan will be given when building has been measured.

- ⑦ Trench A. - the extension towards ~~the~~ Sted B. continues following W. side of mud brick wall. and floor at depth of ca. 100 cm below the present surface. A few faded green fir. beads were found, - mostly made. I think we may safely dump on this whole area, but have raised the floor cut at several places to ascertain character of earth below.
