impression in regard to the late date of the grey statue is correct, the group covers a considerable period of time (several centuries). Senka-Amun-sken is known, the lady is not known: but the similarity of two makes me think that they were a pair and that the lady is the queen of Sen-ka-amon-seken.

In order to get rid of the dust while Trench A was being photographed, we shifted the gang to a point opp. the second pylon and on the N. of it, cutting out the upper debris. But no extensive work can take place here until we find a place to dump.

N.B.

It now seems as if the floor level of the 25th dyn. was about 3-3 ½ m. below the present level (cf. walls noted under building 100). The Late Meroitic level is about 125-150 under the present level. Under the circumstances we can only select some area near the Great Temple and make our dump there.
